

FEATURES

We have the products you need to design a top quality tunnel ventilation system. Historically popular in poultry facilities this system has now also become a viable option for summer ventilation in the dairy industry. Combining our 50" and 72" dia fans with our Clear Vu and Solar Vu Sliding Panel Systems or our insulated Hinged Wall Panel System provides you with the top quality components you need to set up the Tunnel Ventilation System to meet your hot weather needs. Our Tunnel Ventilation System can also be combined with our ceiling inlet system to provide tempered air intake which can allow this system to operate year round in some applications.

FEATURES

We offer a full line of exhaust fans and fresh air inlets required to design a cross flow ventilation system. These systems have been historically used in poultry and swine applications but have more recently been designed for use in ultra wide (LPCV) dairy facilities. With fans that range from 12” to 72” in diameter and sidewall baffle, ceiling, and hinged wall panel inlets we have all the components to design cross flow ventilation system to meet your particular requirements.

FEATURES

By combining natural and power ventilation we can design a system that gives you the best of both worlds. The use of power ventilation in cold weather conditions provides tight temperature control and minimizes any potential for drafts on your livestock. As the outside temperature rises the system automatically switches over to natural ventilation giving you the benefits of quiet, energy efficient ventilation with the natural light that makes these type of systems the first choice in many livestock applications.
